- Bachelor of Computer Science in Victoria University of Wellington, New Zealand, 2010

Project Demos

- urReview: A full-stack project which allows a user to sign-up, log-in, write/edit/delete comments and log out. The app uses the MVC model and is deployed on Heroku.
  - *Technologies used: Bcrypt, dotenv, express, express-handlebars, express-session, mysql2, sequelize*

- ArtHouse: An app for the artist lovers. The aim of this project is to create a one stop space to find an artist's biography and artworks. You can search, mark/unmark favourites, and check out art eras.
  - *Technologies used: HTML 5, CSS, Javascript, jQuery, Jsdliver library, Foundation CSS, Artic API, Wiki API*

- Weather Dashboard: An app for weather searching. You can type a city name and check out the current and forecast weather report. Your search history will also be saved locally.
  - *Technologies used: HTML 5, CSS, Javascript, localstorage, moment.js, Openweathermap API*
